PN PRO PN 2%

- This skin booster with PN (polynucleotides), niacinamide, and hyaluronic acid offers a powerful combination to rejuvenate and hydrate the skin.

- Polynucleotides promote cell regeneration while niacinamide helps improve skin texture and tone and hyaluronic acid provides intense hydration by retaining moisture, resulting in plumper, smoother, and more radiant skin.

Main Ingredients

- Polynucleotide (PN)
 - Niacinamide
 - Tri-peptide-1
 - Hyaluronic Acid
-

Active ingredient of iLLUMA PN Pro – Polynucleotide

- Active ingredient of iLLUMA PN Pro – Polynucleotide

A high concentration of Polynucleotide (PN): 20mg/mL

- Creates optimal conditions for cell growth.
- Enhances the production of extracellular matrix components and various growth factors essential for tissue regeneration.

A circular inset image showing a microscopic view of a cell. The nucleus is highlighted with a glowing green and blue geometric pattern, surrounded by various organelles and a blue fluid environment.

• Niacinamide – skin brightening factor

Niacinamide, a form of vitamin B3, is essential for cellular repair and function. It prevents skin dullness, enhances ceramide production for improved barrier function, and offers deep hydration, making it a valuable component in anti-aging and moisturizing skincare regimens.

A circular inset image showing a microscopic view of skin cells and collagen fibers. The cells are depicted as rounded structures with internal details, and the collagen fibers are shown as a network of interconnected strands.

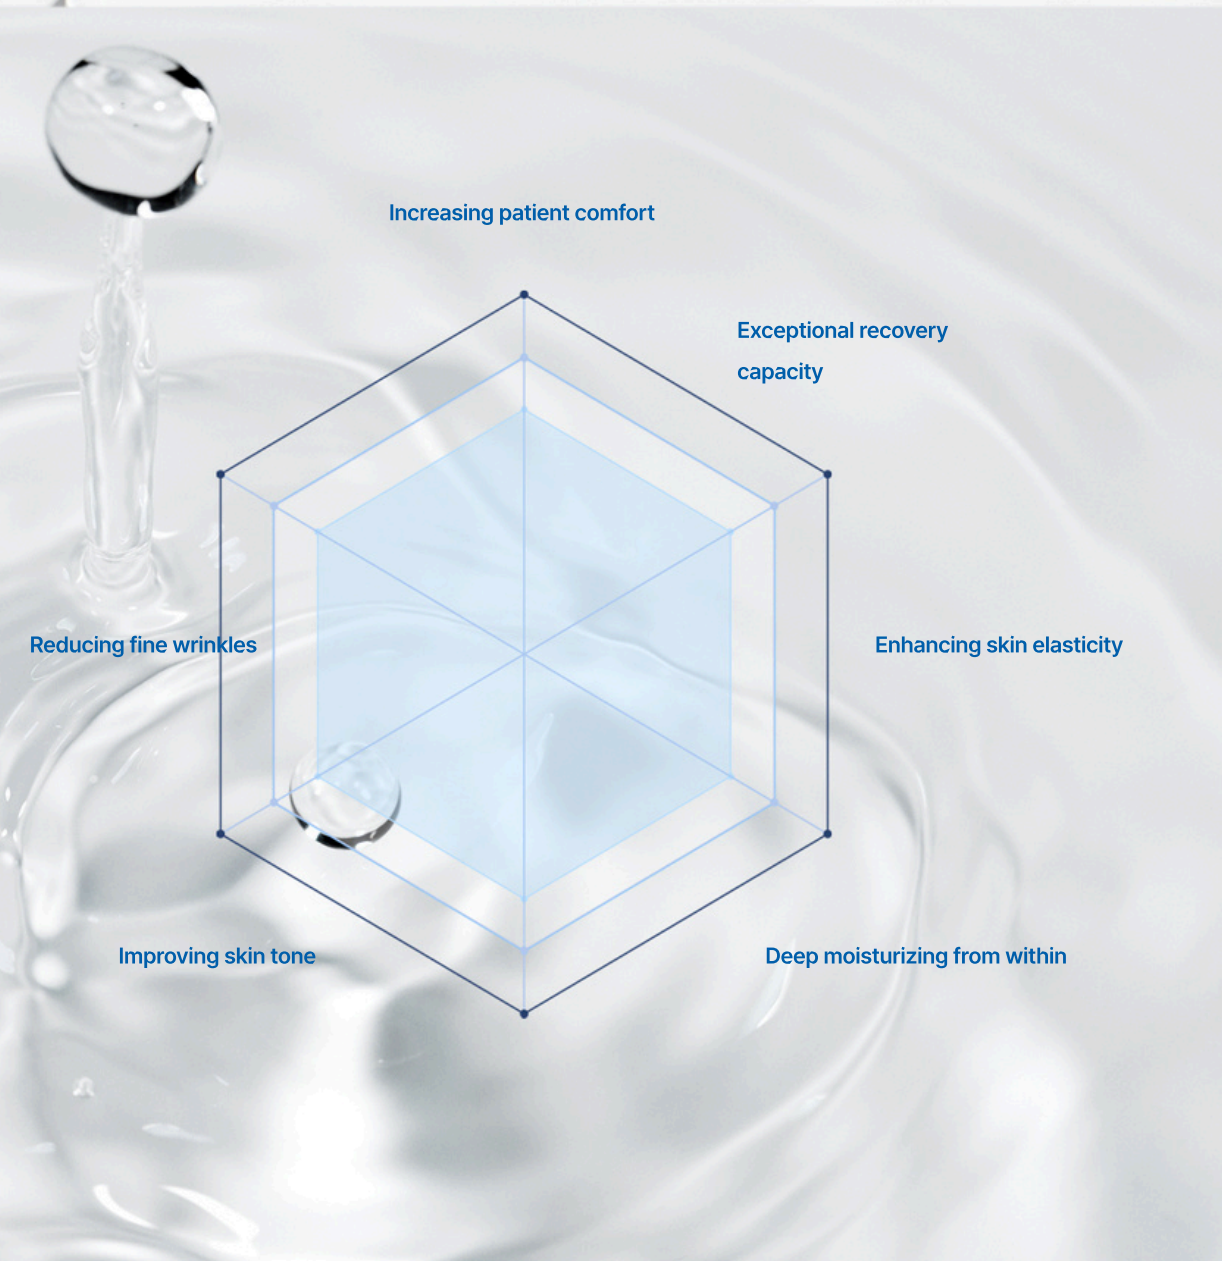

• Tri-peptide-1 – skin regenerating factor

Tri-peptide-1 is a three-amino-acid peptide that stimulates collagen production, accelerates wound healing, and improves skin texture. It plays a key role in skin regeneration and anti-aging treatments.

A circular inset image showing a microscopic view of a water droplet on skin cells. The droplet is a large, clear sphere with a bright reflection, sitting on a surface of rounded skin cells.

• Hyaluronic Acid – deep hydrating factor

Hyaluronic acid can attract and retain moisture in the skin, leading to improved elasticity and a plumper, more youthful appearance. It can also help reduce the appearance of fine lines and wrinkles by adding volume and smoothing out the skin's surface.

iLLUMA PN Pro effects & benefits

- **iLLUMA PN PRO** promotes skin regeneration to improve wrinkles, scars, pores, redness, and pigmentation. It boosts collagen, restores the extracellular matrix, and enhances elasticity and brightness for a smoother complexion. Made with biocompatible DNA fragments from salmon, it offers natural rejuvenation and deep hydration.

Package & Needle type

2.5ml x 2 syringes / box

Recommended needle type:

- 32~34G needle
- Meso Injector using 16-pin needle

Intervals:

It is recommended to administer to the facial skin of adults

It is recommended to administer to the facial skin of adults in their 30s and 40s at 2-week intervals for a total of 4 times to clearly observe the effectiveness.

Caution

- Consult a dermatologist, review the ingredient list for known allergens, inform the practitioner of any medical history, and monitor for signs of allergic reactions, seeking immediate medical attention if severe symptoms occur.
- It is recommended to avoid excessive drinking, sauna, hot baths, and strenuous exercise for 3-7 days after the procedure.
- Embossing, bruising, swelling, slight pain, and redness may occur after the procedure, but they are temporary and will subside within a few days.
- Face wash and light makeup can be done from the next day.
- It is recommended to use moisturizer frequently and apply sunscreen when going out. Avoid using scrubs or receiving peeling treatments.
