

# BENEFITS

- REVITALIZING**  
stimulates regeneration, renewing and rejuvenating the skin
- MOISTURIZING**  
hydrates deeply, reducing dryness and enhancing skin glow
- TIGHTENING**  
boosts collagen, improving skin firmness and tightness
- LIFTING**  
lifts and firms, giving the skin a youthful, toned look

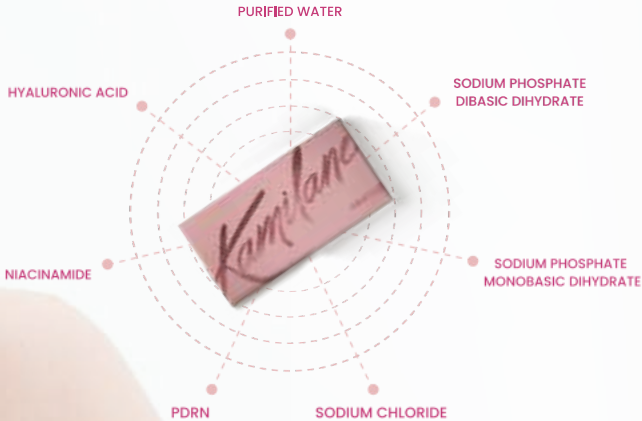

# INTRODUCTION

Kamilane Shine Skin Booster is an advanced solution designed to transform skin health and appearance. Combining three powerful ingredients – PDRN, Niacinamide, and Hyaluronic Acid – this treatment enhances skin radiance, hydration, and overall texture, with a concentration of 20mg/ml.

Kamilane Shine Skin Booster combines three powerful ingredients—PDRN, Niacinamide, and Hyaluronic Acid – to provide comprehensive skin rejuvenation. PDRN, derived from salmonid enzymes, stimulates collagen production, promoting skin elasticity and firmness while accelerating the regeneration of damaged cells for a smoother, more youthful appearance. Niacinamide (Vitamin B3) brightens the skin, reduces pigmentation, evens out tone, and strengthens the skin's moisture barrier, protecting it from environmental damage. Hyaluronic Acid draws moisture to the skin's surface, ensuring deep hydration and a plump, dewy look. Together, these ingredients work synergistically to enhance skin radiance, hydration, and texture, addressing both the external and internal skin needs.

PDRN, Niacinamide, and Hyaluronic Acid enhance skin health—PDRN regenerates, Niacinamide brightens, and Hyaluronic Acid hydrates for a radiant and deeply nourished complexion with improved elasticity and youthful glow.

# ACTIVE INGREDIENTS

# ADVANCED HYDRATION

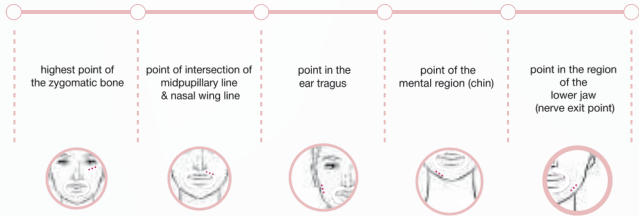

Kamilane Shine Skin Booster not only hydrates but also smooths fine lines, improves texture, and supports lymphatic drainage, enhancing detoxification and circulation for a glowing look. This powerful formula is ideal for treating dryness, fine lines, pigmentation, and dullness, offering visible, lasting results with minimal downtime.

Kamilane shine

2ml x 1 syringe

5 - POINT TECHNIQUE:

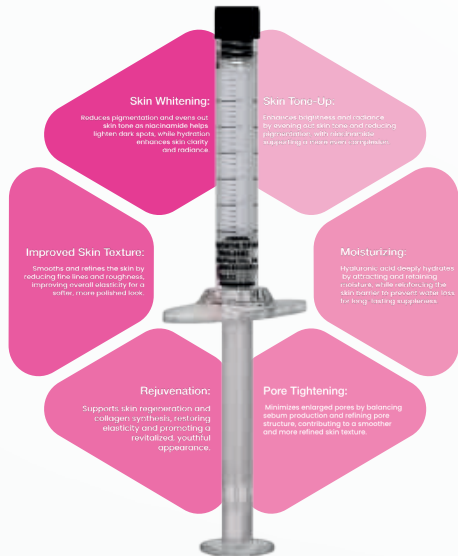

- 1 **FACE INJECTION PROTOCOL**
- Volume: 2ml
  - Technique: 5 injection points per side (1ml per side)
  - Injection Volume: 0.2ml per point
  - Depth: Subdermal layer

- 2 **NECK INJECTION PROTOCOL**
- Volume: 2ml
  - Technique: 10 injection points across the neck
  - Injection Volume: 0.2ml per point
  - Depth: Preplatysmal fat
  - Coverage: Even distribution across the neck for optimal rejuvenation

- 3 **COURSE OF PROCEDURES AND RESULTS**
- Total Treatments: 3 procedures (2ml each time)
  - Frequency: 1 session every 14 days
  - Results: The patient will notice lightening and increased turgor within 24 hours.
  - The final result can be assessed strictly after 28 days.

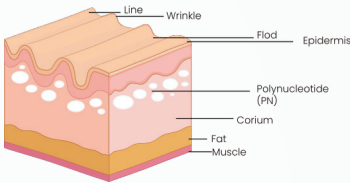

KEY BENEFITS

Skin aging results from the weakened collagen matrix and excessive elastotic fiber material buildup in the papillary and reticular dermis, leading to collagen depletion. These degenerative changes worsen with age due to endocrine-driven hormonal factors. Kamilane Shine filler effectively remodels the dermis, boosts collagen synthesis, and reduces visible signs of cutaneous aging and structural deterioration. Kamilane Shine effectively remodels the dermis, boosts collagen synthesis, and reduces visible signs of cutaneous aging and structural deterioration.

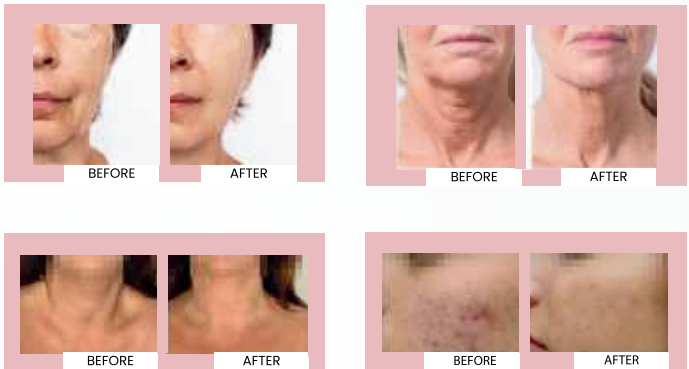

MECHANISM OF ACTION

As the product integrates into the DNA, it promotes collagen synthesis and enhances skin radiance, as illustrated in the figure. It facilitates the transfer of genetic information from sturgeon derived DNA to specific proteins, playing a crucial role in cellular regeneration and repair. Notably, the DNA structure of sturgeon milk closely resembles that of human leukocyte DNA, ensuring better biocompatibility and efficacy in skin rejuvenation. The primary mechanism involves an immunomodulatory effect, stimulating the natural production of collagen lost with aging. Additionally, it activates fibroblasts and supports extracellular matrix remodeling, improving skin elasticity and hydration. The product also functions as a potent antioxidant, neutralizing free radicals that contribute to premature aging.
