

5mL x 2 Vials / Box

iLLUMA NAD+

Dual Power of NMN & NAD+

The Next-Gen Skin Booster for Deep Cellular Renewal

Main Ingredients

NMN
(Nicotinamide Mononucleotide)

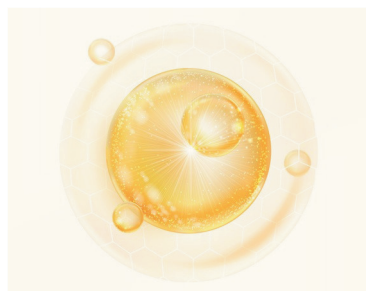

NAD⁺
(Nicotinamide Adenine Dinucleotide)

Sodium Hyaluronate

Hydrolyzed Hyaluronic Acid

Niacinamide

What is NAD⁺?

NAD⁺ is a vital coenzyme involved in over 500 cellular reactions, including **cell regeneration**, **oxidative stress reduction**, and **mitochondrial repair**. Direct supplementation delivers **instant cellular activation** and amplifies anti-aging effects.

What is NMN?

NMN is a cellular molecule that serves as a precursor to NAD⁺, meaning it is converted into NAD⁺ within the body. This process supports collagen synthesis, improves skin elasticity, and aids in DNA repair—key functions for preserving youthful and healthy skin.

The Synergy of NMN + NAD⁺

Combining NMN and NAD⁺ in one formula unlocks a **dual-action rejuvenation pathway**

Immediate Effect

NAD⁺ provides direct energy and boosts repair at the cellular level.

Sustained Activation

NMN continuously fuels NAD⁺ production for long-term restoration.

Synergistic Boost

Together, they optimize mitochondrial function, protect against aging triggers, and accelerate visible skin renewal.

This breakthrough pairing mimics the body's natural regeneration cycle, restoring vitality faster and more deeply than with either ingredient alone.

Benefits

- Reverses signs of aging through energy-based cell renewal
- Boosts dermal thickness & collagen synthesis
- Protects against UV-induced and oxidative damage
- Deep hydration and brightening with hyaluronic acid and niacinamide
- Strengthens barrier, elasticity, and resilience of fatigued skin

Exceptional Features

Scientifically backed synergy of **NAD⁺ + NMN**

Clinical-level **mitochondrial activation**

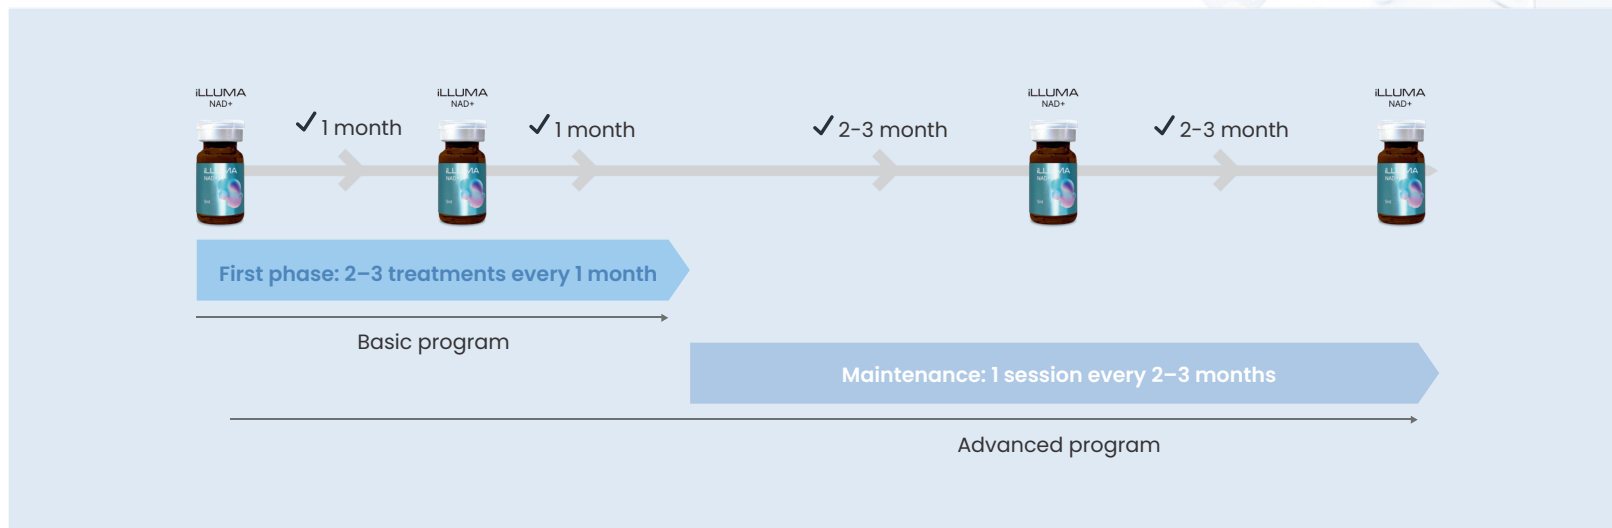

Anti-photoaging protection and wrinkle reduction

Designed for **high-performance anti-aging** treatments

Recommended Protocol

For both intensive anti-aging programs and long-term skin health support.

Treatment methods

✓ MTS (Microneedling Pen)

Apply iLLUMA NAD+ during or immediately after microneedling to enhance dermal absorption.

✓ Manual Needle Injection (Mesotherapy)

Inject 0.02–0.05ml per point into the dermis using 32–34G needle.
Approx. 2.5ml per session.

✓ RF (Radiofrequency Device)

Perform RF first, then apply iLLUMA NAD+ topically.
Avoid using before RF due to heat sensitivity.

✓ HIFU (High-Intensity Focused Ultrasound)

Apply iLLUMA NAD+ after HIFU session to support tissue recovery and collagen regeneration.

✓ Fractional Laser (CO₂, etc.)

Apply a few minutes post-laser to accelerate healing and reduce inflammation.

✓ Derma-roller

Roll gently in multiple directions, then apply iLLUMA NAD+ to enhance skin absorption.

✦ Post-Care Advice

- ✓ Avoid alcohol, saunas, exercise for 3–5 days
- ✓ Use calming skincare and daily sunscreen
- ✓ Avoid exfoliants and harsh treatments during recovery
